

Workshop PHP PART 2

Create Database and Table Using phpMyAdmin

1. Access phpMyAdmin:
 - Open phpMyAdmin in your browser (available via localhost/phpmyadmin).
2. Create a Database "item_management"
3. Create a Table and name it items.
4. Add the following columns:
 - id (int, primary key, auto-increment)
 - name (varchar(255))
 - description (text)
 - price (decimal)
 - created_at (datetime)
 - is_active (boolean)

Connect to the Database Using PHP

5. Create a connection.php file to establish a connection to the MySQL database using PDO.

Add an Item

6. Create a add_item.php file containing a form that allows the user to add an item to the database.
7. The form will send the data to the same page using the POST method.
8. Add the Database connection using

```
require_once 'connection.php';
```

9. After the form is submitted, the PHP script will process the data, validate it, and then insert it into the MySQL database using a PDO query.
10. Add at least 3 items via the form.

Display Items

11. Create a display_items.php file to show all items in the database.
